Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application:

Listing of Claims:

1.   (currently amended) A method, implemented by a computer device, for

providing search results, comprising:

        receiving a search query;

        retrieving one or more objects in response to the search query;

        determining whether the search query corresponds to at least one query

theme of a group of query themes;

        ranking the one or more objects based on a result of the determination; and

        providing the ranked one or more objects.

2.   (original) The method of claim 1 wherein the objects include web pages.

3.   (original) The method of claim 1 further comprising:

        determining whether any of the one or more objects relates to a list of

favored and non-favored sources.

4.   (original) The method of claim 3 wherein the ranking includes:

        determining a score for those objects that are unrelated to the list of

favored and non-favored sources using a first group of parameters,

determining a score for those objects that relate to the list of favored or non-favored sources using the first group of parameters and an editorial opinion parameter, and

ranking the objects based on the determined scores.

5.   (original) The method of claim 4 wherein the editorial opinion parameter causes the rank of those objects corresponding to favored sources to be increased and a rank of those objects corresponding to non-favored sources to be decreased.

6.   (original) The method of claim 1 wherein the determining includes:

determining whether the search query corresponds to a query rule associated with each query theme.

7.   (original) The method of claim 1 wherein each query theme is classified into a first set of topics, and

wherein the determining includes:

classifying the search query into a second set of topics, and

determining that the search query corresponds to a query theme when the second set of topics relates to the first set of topics associated with that query theme.

8.   (currently amended) A ~~system~~ <u>computer device</u> that provides search results, comprising:

means for receiving a search query that includes at least one search term;

means for retrieving one or more objects based on the at least one search term;

means for determining whether the search query corresponds to at least one of a plurality of query themes;

means for ranking the one or more objects based on whether the search query corresponds to at least one of the plurality of query themes; and

means for providing the ranked one or more objects.

9.   (original) A computer-readable medium containing instructions for controlling at least one processor to perform a method that provides search results, the method comprising:

receiving a search query that includes at least one search term;

obtaining one or more objects based on the at least one search term;

determining whether the search query corresponds to at least one of a plurality of query themes;

determining a score for each of the one or more objects based on whether the search query corresponds to at least one of the plurality of query themes; and

providing a ranked list containing the one or more objects based on the determined score.

10. (original) A server comprising:

a memory configured to store instructions and a group of query themes; and

a processor configured to execute the instructions to obtain a search query that includes at least one search term, retrieve one or more objects based on the at least one search term, determine whether the search query corresponds to at least one of the group of query themes, rank the one or more objects based on whether the search query corresponds to at least one of the group of query themes, and provide the ranked one or more objects.

11. (currently amended) A method for determining an editorial opinion parameter for use in ranking search results, comprising:

developing one or more query themes;

identifying, for each query theme, a first set of objects as favored objects;

identifying, for each query theme, a second set of objects as non-favored objects; [[and]]

determining an editorial opinion parameter for each of the objects in the first and second sets;

using the editorial opinion parameter, via a computer device, to alter a ranking of a list of objects retrieved in response to a query .

12. (original) The method of claim 11 further comprising:

determining, for each query theme, one or more rules for determining whether a search query satisfies the respective query theme.

13. (original) The method of claim 11 further comprising:

determining, for each query theme, one or more topics for determining whether a search query satisfies the respective query theme.

14. (original) The method of claim 13 wherein the one or more topics are selected from at least one hierarchical directory

15. (original) The method of claim 11 wherein the first and second sets of objects are sets of web sites.

16. (original) The method of claim 15 wherein the identifying a first set of objects includes:

identifying the first set of objects using host names.

17. (original) The method of claim 15 wherein the identifying a first set of objects includes:

identifying the first set of objects using one or more Uniform Resource Locator (URL) prefixes.

18.   (original) The method of claim 15 wherein the identifying a first set of

objects includes:

classifying each query theme into a set of topics from a hierarchical

directory, and

identifying host names listed under the set of topics as being in the first set

of objects for that query theme.

19.   (original) The method of claim 11 wherein the editorial opinion parameter

causes a rank of an object to be increased or decreased based on whether the object is in

the first or second set.

20.   (original) A computer-readable medium containing one or more

instructions for controlling at least one processor to perform a method for determining an

editorial opinion parameter for use in ranking search results, the method comprising:

identifying, for each of a group of search query themes, a first set of

objects as favored objects;

identifying, for each of the group of search query themes, a second set of

objects as non-favored objects; and

determining an editorial opinion parameter for each of the objects in the

first and second sets of objects.

21.   (currently amended) A <u>system comprising:</u>

<u>a</u> computer-readable medium containing a data structure comprising:

a query theme field that stores at least one query theme[[;]] <u>,</u>

a favored and non-favored sources field that stores information

identifying favored and non-favored web sites for each query theme in the query theme

field[[;]] <u>,</u> and

an editorial parameter field that stores an editorial parameter for

each favored and non-favored web site identified in the favored and non-favored sources

field <u>;</u>

<u>at least one processor configured to use the data structure to rank objects</u>

<u>retrieved in response to a query.</u>

22.   (currently amended) The ~~computer-readable medium~~ <u>system</u> of claim 21

wherein the at least one query theme includes at least one of a query theme rule and a set

of topics from one or more hierarchical directories.

23.   (original) A server comprising:

a memory configured to store a plurality of query themes, information

identifying, for each of the plurality of query themes, at least one favored or non-favored

item associated with the query theme, and an editorial parameter associated with each

favored and non-favored item; and

a processor configured to:

receive a search query comprising one or more terms,

retrieve items using the one or more terms,

determine a score for each of the retrieved items,

identify one of the plurality of query themes as matching the

search query,

determine, for each of the retrieved items, whether the retrieved

item is associated with one of the favored or non-favored items associated with the one

query theme, and

adjust, for each of the retrieved items, the score of the retrieved

item when the retrieved item is determined to be associated with a favored or non-favored

item.

24.   (new) The computer-readable medium of claim 9 wherein the objects

include web pages.

25.   (new) The computer-readable medium of claim 9 further comprising:

determining whether any of the one or more objects relates to a list of

favored and non-favored sources.

26.   (new) The computer-readable medium of claim 25 wherein the providing

a ranked list includes:

determining a score for those objects that are unrelated to the list of

favored and non-favored sources using a first group of parameters,

determining a score for those objects that relate to the list of favored or

non-favored sources using the first group of parameters and an editorial opinion

parameter, and

ranking the objects based on the determined scores.

27.　　(new)　The computer-readable medium of claim 26 wherein the editorial

opinion parameter causes the rank of those objects corresponding to favored sources to be

increased and a rank of those objects corresponding to non-favored sources to be

decreased.

28.　　(new)　The computer-readable medium of claim 9 wherein the determining

whether the search query corresponds to at least one of a plurality of query themes

includes:

determining whether the search query corresponds to a query rule

associated with each query theme.

29.　　(new)　The computer-readable medium of claim 9 wherein each query

theme is classified into a first set of topics, and

wherein the determining whether the search query corresponds to at least

one of a plurality of query themes includes:

classifying the search query into a second set of topics, and

determining that the search query corresponds to a query theme

when the second set of topics relates to the first set of topics associated with that query

theme.

30.   (new) A server of claim 10 wherein the processor is further configured to:

determine whether any of the one or more objects relates to a list of

favored and non-favored sources.

31.   (new) The server of claim 30 wherein, when ranking the one or more

objects, the processor is configured to:

determine a score for those objects that are unrelated to the list of favored

and non-favored sources using a first group of parameters,

determine a score for those objects that relate to the list of favored or non-

favored sources using the first group of parameters and an editorial opinion parameter,

and

rank the objects based on the determined scores.

32.   (new) The server of claim 31 wherein the editorial opinion parameter

causes the rank of those objects corresponding to favored sources to be increased and a

rank of those objects corresponding to non-favored sources to be decreased.

33.   (new) The computer-readable medium of claim 20 further comprising:

determining, for each search query theme in the group of search query

themes, one or more rules for determining whether a search query satisfies the respective

search query theme.

34.   (new) The computer-readable medium of claim 20 further comprising:

determining, for each search query theme in the group of search query

themes, one or more topics for determining whether a search query satisfies the

respective search query theme.

35.   (new) The computer-readable medium of claim 34 wherein the one or

more topics are selected from at least one hierarchical directory

36.   (new) The computer-readable medium of claim 20 wherein the first and

second sets of objects are sets of web sites.

37.   (new) The computer-readable medium of claim 36 wherein the

identifying a first set of objects includes:

identifying the first set of objects using host names.

38.   (new) The computer-readable medium of claim 36 wherein the

identifying a first set of objects includes:

identifying the first set of objects using one or more Uniform Resource

Locator (URL) prefixes.

39.　(new) The computer-readable medium of claim 36 wherein the

identifying a first set of objects includes:

classifying each search query theme into a set of topics from a hierarchical

directory, and

identifying host names listed under the set of topics as being in the first set

of objects for that search query theme.

40.　(new) The computer-readable medium of claim 20 wherein the editorial

opinion parameter causes a rank of an object to be increased or decreased based on

whether the object is in the first or second set.
